

NEUROMODULATION

Volunteers needed for research study examining Chronic Pain associated with Major Depressive Disorder

The UCLA Neuromodulation group at the UCLA Institute is currently seeking participants for a study to analyze how brain stimulation effects chronic pain associated with Major Depressive Disorder including Fibromyalgia and Myalgic/Encephalomyelitis/Chronic Fatigue Syndrome

Qualifications:

- Are between the ages of 18 and 75 years old
- Right-handed
- Diagnosis of Fibromyalgia or Myalgic Encephalomyelitis/Chronic Fatigue Syndrome

Participation involves:

- Brain stimulation treatments prescribed once daily (Monday-Friday) for 30 visits
- Completion of up three (3) brain activity recordings
- Completion of weekly assessments about mood and mental well-being
- Two (2) Magnetic Resonance Imaging Recordings

Potential Benefits: Participating in this study may experience improvement in pain symptoms and/or mood.

Location : UCLA TMS Clinic at the Semel Institute
